SUMMARY

Backend Engineer specializing in **Java-based distributed systems, event-driven architectures, and scalable API platforms**. Experienced in building **serverless microservices, workflow orchestration systems, and high-performance database pipelines** using AWS and PostgreSQL. Strong background in **system design, performance optimization, and building production-grade backend services**.

EXPERIENCE

Sarvika Technologies

Software Engineer

Aug 2025 – Present

Jaipur, Rajasthan

- **Serverless Backend Systems:** Designed and developed **Java-based AWS Lambda APIs** processing 1 million+ requests/day for a wholesale ecommerce platform.
- Optimized complex PostgreSQL queries, reducing API response latency from **2.5s to 400ms** under peak load.
- **Workflow Orchestration Platform:** Engineered a **DAG-based workflow execution engine** enabling dynamic task graph compilation and runtime execution of **polyglot scripts**.
- Implemented the **task dependency resolution and pipeline orchestration layer**, handling concurrency control, failure propagation, and retry semantics across distributed workflow nodes.
- **Internal Learning Platform:** Architected and built a **Training Management System** supporting program creation, module hierarchies, content delivery, quizzes, assignments, and submission evaluation workflows.
- Designed normalized backend models across **training programs, learners, and assessment pipelines**, enabling scalable enrollment tracking and cohort progress analytics.

DevLabs Technology

Associate Software Developer

Jan 2025 – Jul 2025

Gurgaon, Haryana

- Developed **backend services in Java and Spring Boot** supporting enterprise business workflows involving multi-step process execution and rule-driven logic.
- Built and maintained **REST APIs for validation, business rule processing, and cross-service orchestration**, ensuring reliable service interactions across internal systems.
- Refactored monolithic service components into **modular service units**, improving maintainability and enabling parallel feature development across engineering teams.

PROJECTS

Vendor Onboarding Platform | *Java, Micronaut* | github.com/vasu101/onboarding-platform

- Developed a **stateful vendor onboarding workflow system** supporting multi-stage approval pipelines and document validation.
- Designed rule-driven onboarding processes enabling **dynamic state transitions and auditable onboarding workflows**.
- Implemented RESTful backend services using **Micronaut**, enabling scalable vendor onboarding operations.

WorkLedger — Work Tracking System | *Java, Spring Boot* | github.com/vasu101/workledger-backend

- Built a backend system managing **task lifecycle, employee effort tracking, and audit-ready work records**.
- Designed APIs for **task assignment, progress tracking, and activity logging workflows**.
- Implemented modular service architecture enabling **maintainable backend domain logic**.

TECHNICAL SKILLS

Languages : Java, JavaScript, SQL
Backend : Spring Boot, Micronaut, REST APIs
Cloud : AWS Lambda, AWS S3
Architecture : Microservices, Workflow Engines, Event-driven Systems, Distributed Systems
Databases : PostgreSQL, Query Optimization
Tools : Git, Docker

EDUCATION

Govt. Engineering College Bikaner

B.Tech in Computer Science and Engineering | CGPA: 7.84

2019 – 2023

Bikaner, Rajasthan

EXTRACURRICULAR

HackerRank

Competitive Coding

- Achieved 4 rating in Java and solved 100+ coding problems.

2021 – Present

GeeksForGeeks

Problem Solving

- Maintained a 90-day+ solving streak and built strong coding consistency.

2022 – Present
